

Quality Prescribing

Scottish Reduction in Antimicrobial Prescribing (ScRAP) Programme V2

Updated and extended to support improvements in UTI management

Could you be better at any of the following?

- Minimising resistance and healthcare associated infection
- Managing patient expectations around antibiotics
- Targeting antibiotic prescribing for respiratory tract infection
- Managing urinary tract infection (uncomplicated, complicated, and recurrent)

The Scottish Reduction in Antimicrobial Prescribing (ScRAP) Programme resources have recently been updated and extended to support improvement in urinary tract infection management.

Although primarily aimed at GP practices, ScRAP may also be of interest to others involved in the assessment and management of infection in primary care, for example district nurses and care home staff.

Learn more by registering for our WebEx session which will take place on Wednesday 1 March 2017 from 1-2pm.

Please email HA1@nes.scot.nhs.uk to indicate your interest by Friday 24 February 2017.
